Saving to pdf file [Edit](#) [Report](#) [Quote](#)

by **Hatters** » Wed Oct 10, 2018 6:27 pm

When you create a multi-page pdf file (or batch scan to pdf), XnView adds "Helvetica" font information to the file. This does not allow you to configure the download of the file to the information system (the file is not considered a scan, and recognized pdf file). How to remove this information?

The PDF file is as you say an image file, so the font information arbitrarily entered in the file Properties has no practical significance, does it?

Could you explain the problem you are experiencing in more detail?

Note that PDF files produced by XnView software are not searchable, OCR software is required to make an image file of text searchable.

How to remove this information?

The file properties can be edited in some PDF software, either Adobe Acrobat or equivalent software, or special utilities, some freeware, if you need to.
